Skills

Overview

Programming

0 —————> 10,000+ *HWLOC*

Python • Databricks • PyTorch • AWS

JS • CUDA • LangChain • On-prem AI

Pinecone • AgentOps • MCP • Pydantic

Recent Projects

Multi-Agent Insurance Claim Autorep (MAICA)

- Multi-agent capstone project for Google AI Agents Intensive bootcamp.
- Designed using Google ADK; comprising 6 base agents + 2 orchestrator agents for optimal motor insurance claim processing.

biologik.ai

- Cancer incidence reduction platform leveraging bioinformatics, ML, and GenAI to predict cancer risk.
- biologik.ai is poised to help change the paradigm of digital health from treatment to prevention.

Summary

- Scientist-Builder turning data into decisions and production impact.
- 20 years programming experience; 8 years ML + AI technician and leader.

Experience

Dec 2025 - Present

Head of Engineering

We are Eden

- Spearheading a pioneering AI medico-legal platform.
- Architected **agentic and retrieval AI** stacks turning legal docs into actionable governance decisions; achieved 99% retrieval accuracy while meeting complex privacy and safety design requirements.
- Owned **'token vs cash' unit economics** end-to-end, reducing inference spend through cost/performance instrumentation, context optimisation, quantisation/LoRA, routing and caching for scale.
- Established **Responsible AI** & GRC foundations, enacting DPIA, data governance, model cards, monitoring, audit trails and secure-by-default controls to make the platform regulator-ready.
- Highlight: Automated reproductive-health compliance at enterprise scale. Partnered with AWS and GCP cloud. Cut regulatory compliance time from **1 year to 1 day** by accelerating stakeholder decision-making in production under real commercial constraints.

Jun 2024 - Present

Principal AI Engineer

Codeblock Labs

- Designed, deployed and supported **end-to-end multimodal genAI** software that turned abstract business goals into shipped products.
- Bridged **frontier research and enterprise value** with clear roadmaps, measurable outcomes, and production-grade reliability.
- Led strategy and implementation of agentic workflows in **regulated environments** (health and fintech) under consulting model.
- Established enterprise-grade guardrails and data governance aligned to **EU AI Act**, enabling defensible deployment at rapid scale.
- Highlight: Strategic AI leadership (**0→1→scale**); average 13 major releases per quarter; 99.99% uptime; 100k+ served users.

May 2022 - May 2024

Lead Data Scientist

AXA UK

- Built and operationalised **production-grade ML pipelines** on Azure + Databricks, owning the full DS lifecycle from ingestion to release.
- Line-managed** junior DS to create data-driven value in insurance.
- Highlight: **Shipped ML/AI-powered claims engines** that decide what to pay, what to challenge, and balance predictions with customer retention; reduced indemnity spend by £10m and counting.

Education

Dec 2024

PhD, Computer Science

University of Bristol

Thesis title: Intelligent Testing for Simulation-Based Verification of Complex Industrial Hardware

Jul 2017

MSc, Advanced Computing

University of Bristol

Memberships & Certifications

2025

Chartered Management Institute Member

CMI

2024

AWS Certified Machine Learning - Specialty

Amazon Web Services
